

Abstract

A method for the treatment of co-morbid conditions associated with obesity in a human in need of such treatment which comprises administration to the human of a therapeutically effective amount of a compound of formula I

including enantiomers and pharmaceutically acceptable salts thereof, in which R<sub>1</sub> and R<sub>2</sub> are independently H or methyl, and a therapeutically effective amount of a compound of formula II

wherein the compound of formula I and the compound of formula II are administered simultaneously, separately or sequentially.
